DATACARD® MX Series System

Make an affordable move to the world of modularity

The DATACARD® MX Series solution provides the industry's most affordable high-volume card issuance system that offers true field modularity for mid-to-small sized card operations with growth in mind. Card issuers can take advantage of adding inline card delivery and envelope insertion to streamline operations and increase security to deliver completed mail-ready packages.

DATACARD® MX2100™ CARD ISSUANCE SYSTEM

Our most affordable central issuance platform that offers true modularity. You can configure the system with the exact personalization capabilities you need, then add new modules as your card designs and card volumes change. Up to 1,200 CPH rated speed makes this an ideal system for mid-sized service bureaus or smaller in-house operations with aggressive growth plans.

ADVANCED TECHNOLOGY END-TO-END

- System Controller
- Card Input
- Metal Card Input
- Card Cleaning
- Vision Verification Gen 2
- Magnetic Stripe Encoding
- OCR-B/Bar Code Scanner
- Smart Card Personalization
- Durable Graphics Printing
- Graphics Printing Gen 2
- Single-Step Color Printing
- Laser 325
- Basic Topcoat
- DATACARD® CardGard® UV-Curing Topcoat
- DATACARD® DuraGard® Laminate
- Secure Indent
- Embossing Indent Printing
- Secure Indent Printing
- Topping
- Label Affixing
- Card Flippers
- Multi-Card Buffer
- Quality Assurance
- Card Output
- Metal Card Output
- DATACARD® MXD210™ Card Delivery System
- DATACARD® MXi212™ Envelope Insertion System
- DATACARD® MXi610™ Card Delivery System

Configure the right solution to meet your card issuance needs

Powerful integrated software: Controller Software provides a single interface for all interactions with the MX2100 System. This powerful software manages seamless access to the system, enables easy creation of card and job setups, and tracks production level audits to drive efficiency and help enable operational security.

Unique technologies: Supports proven card personalization technologies as well as advanced UV-curing and laser engraving in a compact, affordably priced footprint.

True field modularity: The MX2100 System is the industry's most affordable high-volume solution that offers true field modularity and strong investment protection. More than simple "configurability," it allows you to start with the capabilities you need today, then add capacity or new technologies — with truly field-installable modules — as your needs change. The MX2100 System is driven with a common software platform shared by the entire MX Series family.

Smart card productivity: An innovative smart card module — powered by Adaptive Issuance™ Chip Interface Software — offers flexibility and high-speed processing of contact, contactless, dual interface, or combi smart cards in a smaller system footprint. Scalable to meet growing demands.

Advanced quality assurance: Greatly reduce errors and waste by automatically verifying physical and electronic elements inline. These capabilities reduce the need for manual inspection and directly contribute to higher throughput and lower costs.

Service and support: The MX Series Platform is supported by the industry's largest service and support network, which spans more than 150 countries worldwide. Online and phone support is available 24/7.

MX2100 Card Issuance System

Make an impact with inline card delivery

Take advantage of incredibly powerful ways to differentiate your brand and your card program. Create card carriers with customized 1:1 messages — use the space to encourage card activation, add promotional coupons, and cross-sell other products and services. Add variable data to personalize your mailings and make your messages stand out.

MXD210 CARD DELIVERY SYSTEM

Reduce production steps and increase throughput: Discover the power of inline card delivery. Print personalized messages for cardholders, then affix cards with no manual intervention or slowing down productivity.

Card flexibility: Place up to four cards per form on either the middle and/or lower panels. This additional template and card placement flexibility accommodates a wider range of high-impact marketing campaigns.

Increased production integrity: Reduce human error and help ensure card-to-form integrity by leveraging the automated bar code verification process. Multiple verifications provide increased audit control and data integrity.

Print-on-demand: Leverage black and white printing inline, feeding pre-printed sheets into the system.

MXD210 Card Delivery System

Improve efficiency and create custom card mailings

Bring the reliability and security you need to finished mailings by adding the inserting and folding technologies of the MXi212 System to your inline issuance process.

MXi212 ENVELOPE INSERTION SYSTEM

Increase productivity: The MXi212 System offers inline insertion and envelope sealing. The system requires very minimal operator intervention.

Enhance security: Because the entire issuance process occurs inline, it substantially reduces the risk of lost or stolen cards.

Mix and match: Choose from the single-insert feeder, a dual-station tower feeder that loads two inserts and helps save space, or the integrity verification feeder that helps ensure the proper inserts are loaded, reducing errors.

Maximize marketing impact: Select unique inserts for individual cardholders during the same print job and data stream. Process more customized mailings per hour with fewer interruptions for job setup.

Complete card-to-envelope solutions

Increase throughput and productivity by printing card carriers, affixing cards to carriers, and inserting them into envelopes completely inline.

With the MXi212 System, you can choose from the following modules:

- Standard Insert Feeder
- Integrity Insert Feeder
- Tower Insert Feeder
- Inserter Base and Envelope Feeder
- Envelope Stacker

Technical Specifications

MX2100™

MXD210™

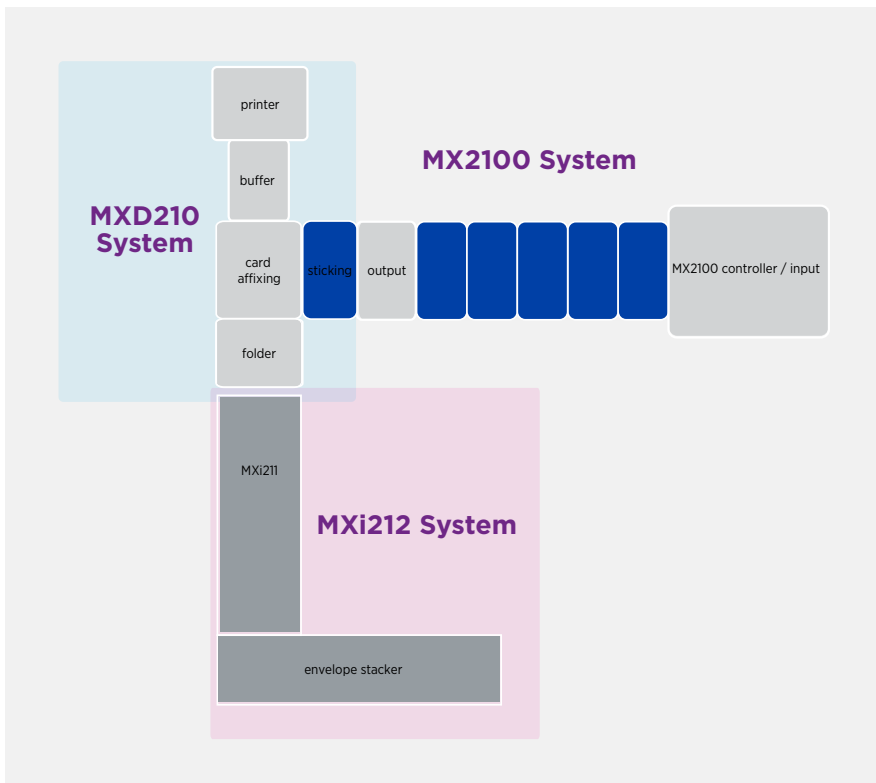

MXi212™

MX2100 System Specifications

Rated Speed	Up to 1,200 CPH
Operating System	Microsoft® Windows® 10 IoT Enterprise 2016 LTSC
Template Management	Microsoft® Word 2019
Maximum Configuration	MX2100: Up to 9 personalization modules (not including Base System, Card Input, Card Cleaning, Vision Verification, Quality Assurance, Multi-card Buffer, and Card Flipper) MXD210: Up to 1 system per personalization system MXi212: Up to 1 per MXD210 System, up to 7 Insert Modules (up to 14 insert stations with tower feeder)
Cards Per Form	Up to 4 cards on middle and/or lower panels
Printer Ready Data	PCL (black and white), PDF
Electrical Requirements	MX2100: 230V, 50/60Hz, 15 Amps MXD210: 230V, 50/60Hz, 15 Amps MXi212: 230V, 50/60Hz, 15 Amps
Operating Requirements	Room temperature: 65° to 80° F (18° to 27° C); Humidity: 35% to 85% (non-condensing) Recommend service area around system be at least 36 in. (76.2 cm) to help provide adequate airflow. See module data sheets for specific information
Storage Requirements	Room temperature: 50° to 130° F (10° to 54° C); Humidity: 0% to 85% (non-condensing)
Agency Approvals	FCC, UL, cUL, CE, and RoHS Compliant
Card Types Supported	ISO/IEC 7810 ID-1 Size; 30 mil (+/- 10%)
Card Materials Supported	Most card materials can be processed, including PVC, composite, polycarbonate, ABS, PET, and PETG. Limitations may exist for each personalization or verification technology.
Paper Types Supported	20-24 lb bond paper (90.3gsm) See DATACARD Card Delivery Paper/Envelope Guidelines.

Note: MX2100 System modules cannot be used in the DATACARD® MX6100™ System and MX6100 System modules cannot be used in the MX2100 System.
